Glossary

Term	Definition
UniReserve	The proposed web-based reservation system for Kuwait University rooms and equipment.
Booking	A confirmed reservation created after a reservation request is approved.
Student / Requester	A user who searches for available rooms or equipment and submits reservation requests.
Staff / Faculty	University staff or faculty members who can use the system to search for and request reservations.
Room	A reservable campus space, such as a classroom, lab, meeting room, or auditorium.
Equipment	A reservable university resource, such as a projector, lab kit, or other shared item.
Audit Log	A record of important system actions such as request submission, approval, rejection, cancellation, and modification.
Reservation Request	A request submitted by a user to reserve a room or equipment for a specific date and time.
Pending Status	The status assigned to a reservation request while it is waiting for admin review.
Approved Status	The status assigned when the Facilities Admin accepts a reservation request.
Rejected Status	The status assigned when the Facilities Admin denies a reservation request.
Availability Search	The process of checking whether a room or equipment item is free during a selected date and time.
Double Booking	A conflict that happens when the same room or equipment is reserved for overlapping time periods.
Authentication	The process of verifying that a user has valid university login credentials.
Authorization	The process of checking whether a user has permission to access a specific system function, such as admin approval.
Data Retention	The period during which system data, such as booking records and audit logs, is stored before being archived or deleted.
Usability Evaluation	The process of testing the prototype with users to identify what worked, what failed, and what should be improved.
Stakeholder	Any person or group affected by the system, such as students, staff/faculty, facilities admins, and developers.

1. Document Control

1.1 Version history

Version	Date	Author	Change summary	Approval
0.1	2026-03-28	Noura Almethen	Initial draft of Sections 1, 2, 3	Pending
0.2	2026-03-29	Team	Added Introduction, requirements, use case model, and formatting updates	Pending
0.3	2026-04-23	Team	Revised instructor comments	Pending
0.4	2026-04-23	Team	Revised use cases based on instructor comments	Pending
1.0	2026-04-25	Noura Almethen	Final reviewed version for submission	Approved

1.2 Credits

Name	Role/Task
Noura Almethen	Use Case Diagram, textual specifications for the 3 main use cases, Section 5.2 ERD / Domain Model, Section 6.1 Prototype Link(s), Section 6.2 Key Screens and States, document integration and final review
Mouddy Almowsharji	Functional Requirements, Non-Functional Requirements, Section 5.3 Data Retention, Deletion, and Auditability
Shaikha Almandeel	Section 2, Section 6.3 Usability Evaluation, references, and Gantt Chart / project management support

2. Introduction

2.1 Purpose

This Software Requirements Specification (SRS) document defines the functional and non-functional requirements of the UniReserve system. It ensures a shared understanding among developers, team members, instructors, and stakeholders regarding system behavior and expected outcomes.

This document serves as a reference for system design, development, and testing, reducing ambiguity and ensuring that the system meets its intended objectives.

2.2 Product vision

UniReserve is a centralized booking system designed to help students, staff, and faculty members in reserving rooms and equipment on campus. The system addresses limitations of informal booking methods, such as manual requests and messaging, which often result in conflicts, inefficiencies, and double bookings. By providing structured workflows, real-time availability, and an approval mechanism, UniReserve improves booking accuracy and operational efficiency. This structured approach reduces errors and enhances the overall user experience by ensuring reliable and organized reservation management. In addition, the system supports notifications and reminders for important booking events, helping users stay informed throughout the reservation process.

2.3 Scope

In scope:

- Search real-time availability of rooms and equipment
- Submit booking requests with required details
- Admin approval or rejection of requests
- Prevent double booking through validation rules
- Modify or cancel bookings
- Maintain booking history
- Send notifications and reminders for key booking event

Out of scope:

- Payment system
- Mobile application
- Full production deployment
- Integration with external systems

The defined scope limits the system to core reservation functionalities, ensuring focused development within project constraints.

2.4 Assumptions and dependencies

Assumptions:

- Users have valid university accounts for authentication
- Internet access is available during system usage
- Users have basic knowledge of system interaction

Dependencies:

- A database system is required to store booking and user data
- The system depends on university authentication services
- Server availability is required to ensure system accessibility

Failure to meet these assumptions and dependencies may affect system availability, performance, and reliability.

2.5 Constraints

The UniReserve system is subject to several constraints that influence its design, implementation, and operation. These constraints define system limitations and must be considered during development and testing.

Regulatory / Policy Constraints:

- The system must comply with Kuwait University policies related to data privacy and access control.
- Only authorized users with valid university accounts are allowed to access system functionalities.
- User data and system logs must be protected to ensure confidentiality, integrity, and accountability.
- The system must maintain audit logs to support traceability of user and admin actions.

Technology / Platform Constraints:

- The system is implemented as a web-based application only, with no mobile application support.
- It depends on a centralized database system for storing reservation requests, bookings, and user data.
- Integration with external systems is not supported in the current version, which limits system interoperability.
- System performance is dependent on internet connectivity and server response time, which may affect user experience under unstable conditions.

Operational Constraints (Deployment Environment):

- The system operates within a university environment, restricting access to users with institutional credentials.
- System availability depends on server uptime and maintenance schedules.
- High demand during peak booking periods may impact system performance and response time.
- Limited technical resources may affect the speed of system maintenance and updates.

2.6 Stakeholder summary

Role	Primary goals	Key needs / pain points	Priority (H/M/L)
Student	Book rooms/equipment	Easy booking, no conflicts	H
Staff/faculty	Manage bookings and request resources	Reliable approval system and booking management	H
Facilities Admin	Review and control reservation requests	Prevent double bookings, enforce policies, manage approvals	H

2.7 Overview

This document is organized into multiple sections to provide a complete understanding of the UniReserve system. Section 2 introduces the system purpose, scope, assumptions, constraints, and stakeholders. Section 3 defines the functional requirements and use-case model.

These sections establish a structured foundation for system development, implementation, and validation.

3. Functional Requirements and Use-case Model

The UniReserve system supports a structured workflow for managing room and equipment reservations. The following functional requirements define the core system behavior.

FR-01: Availability Search

The system shall allow users to search for rooms and equipment by specifying date, start time, end time, and capacity. The system shall display availability status (available or booked) along with key details such as type and location.

FR-02: Reservation Request Submission

The system shall allow users (students, staff, faculty) to submit reservation requests including resource type, date, time, and purpose. Each request shall be assigned a unique ID and stored with a “Pending” status.

FR-03: Validation and Policy Enforcement

The system shall prevent double booking and enforce booking rules such as time limits, advance booking constraints, and access permissions. Invalid requests shall be rejected with a clear reason.

FR-04: Admin Review and Decision

The system shall allow the Facilities Admin to view and review pending requests. The admin shall be able to approve or reject requests, and the system shall update the request status accordingly.

FR-05: Booking Confirmation and Logging

The system shall notify users of request outcomes. Approved requests shall generate a confirmed booking. All actions (submission, approval, rejection, modification, cancellation) shall be recorded in an audit log.

FR-06: Cancellation and Modification

The system shall allow users to cancel or modify bookings within allowed time limits. Any modification shall be revalidated. Late changes shall be rejected.

FR-07: Notifications and Reminders

The system shall send notifications when requests are submitted, approved, rejected, or modified. The system shall also send reminders 24 hours and 1 hour before the booking time.

3.2 Use Case Model

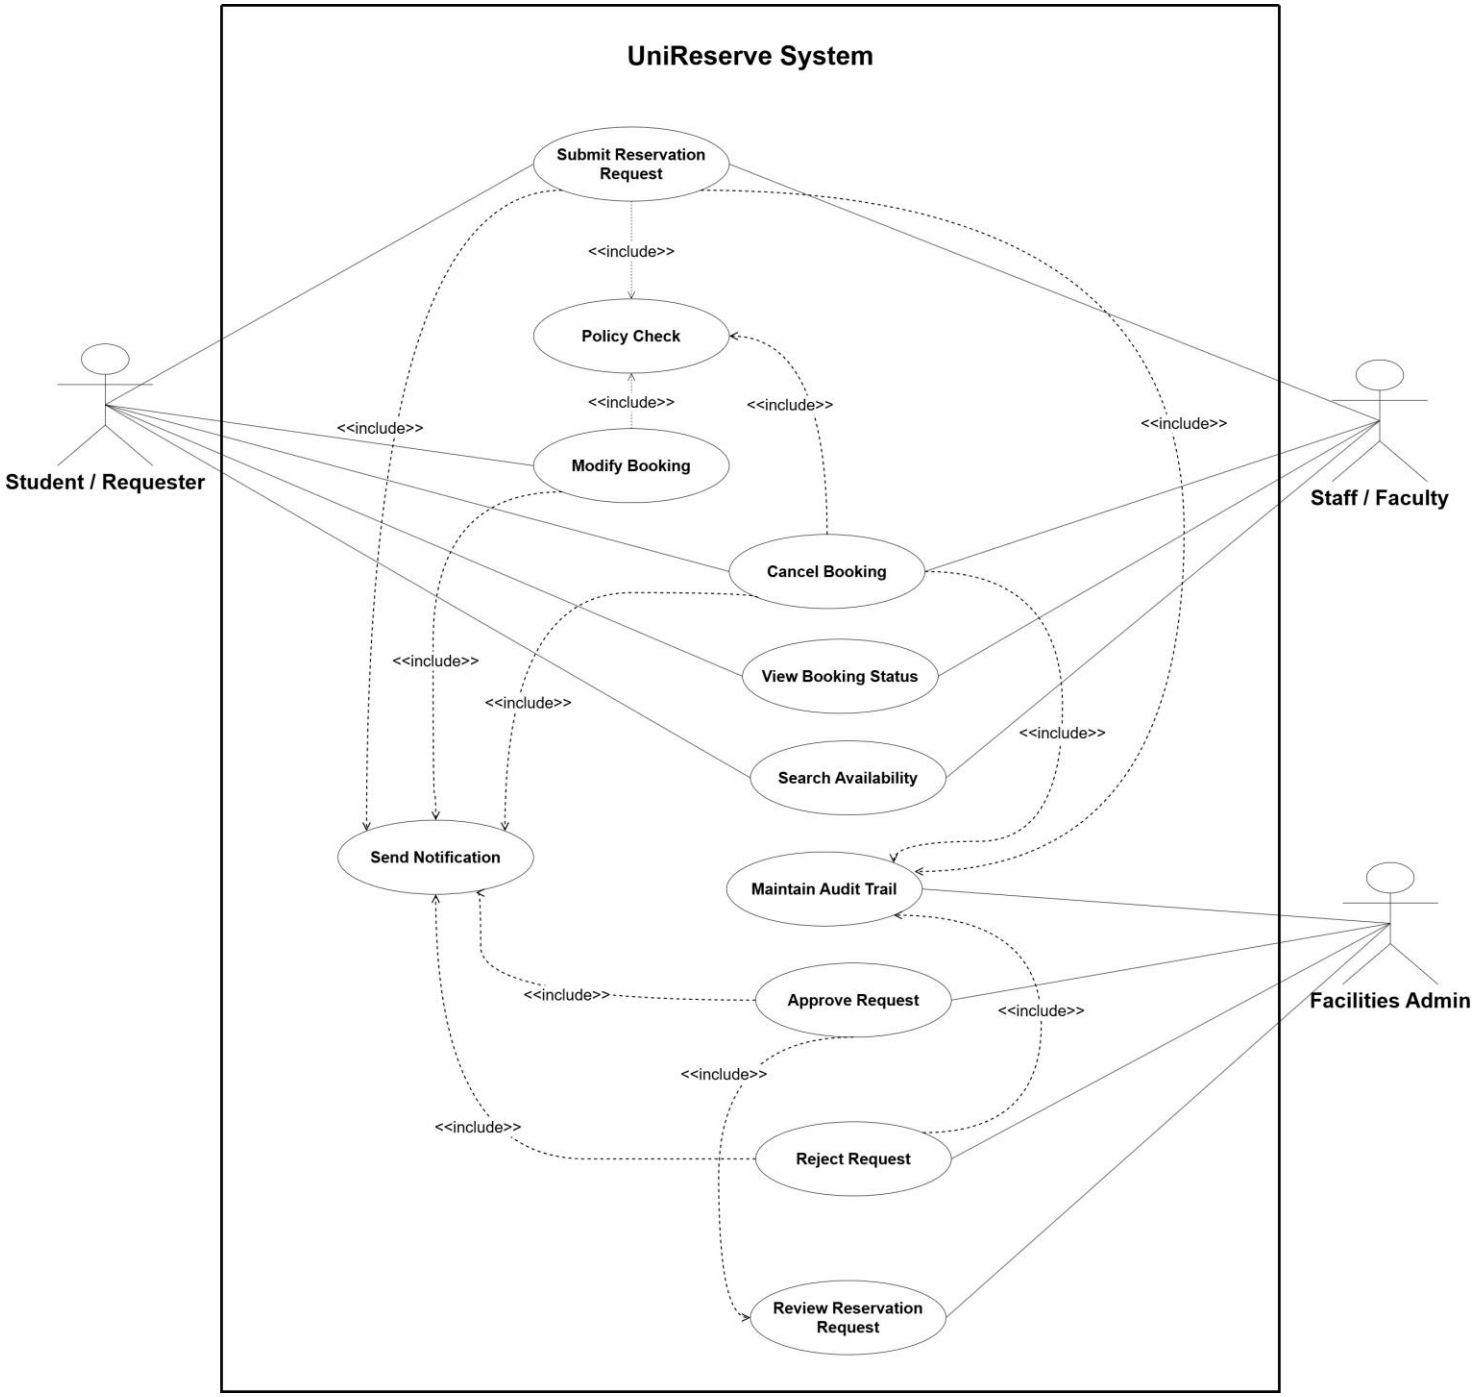

Figure 1 Use Case Diagram

Use case UC-01**:** Search Availability

Related Requirements	*FR-01*
Description (Goal)	*Allow the user to search for available rooms or equipment for a selected date and time.*
Primary Actor(s)	*Student, Staff/Faculty*
Secondary Actor(s)	*None*
Preconditions	• *The user can access the system.* • *Rooms and equipment are already registered in the system.*
Post-conditions	• *A list of matching resources is displayed.* • *The user can see whether each resource is available or already booked.*
Related use cases	*UC-02: Submit Reservation Request*
Basic Flow	1. *The user opens the availability search page.* 2. *The user enters the date, start time, end time, and required capacity or resource type.* 3. *The system checks room and equipment availability.* 4. *The system displays matching resources with their availability status and details.* 5. *The user reviews the search results.*
Alternative Flow	• *A1: No matching resources are found. The system displays a message that no resources are available for the selected period.* • *A2: The user enters an invalid time range. The system asks the user to correct the input.*

Use case UC-02**:** Submit Reservation Request

Related Requirements	*FR-02, FR-03, FR-07*
Description (Goal)	*Allow the user to submit a reservation request for a selected room or equipment.*
Primary Actor(s)	*Student, Staff/Faculty*
Secondary Actor(s)	*Facilities Admin*
Preconditions	• *The user has selected a resource.* • *The requested booking date and time have been entered.*
Post-conditions	• *A reservation request is stored with a unique identifier and Pending status, or the request is rejected if it violates booking policies.* • *A submission notification is generated.*
Related use cases	*UC-01: Search Availability* *UC-03: Review and Approve/Reject Request*
Basic Flow	1. *The user selects an available room or equipment.* 2. *The user enters the booking details, including date, time, and purpose.* 3. *The user submits the reservation request.* 4. *The system checks booking policies and validates the request.* 5. *The system assigns a unique identifier to the request.* 6. *The system stores the request with Pending status.* 7. *The system sends a notification confirming that the request was submitted.*
Alternative Flow	• *A1: The selected resource becomes unavailable before submission. The system rejects the request and informs the user.* • *A2: The request violates a booking policy. The system rejects the request and displays the reason.* • *A3: Required fields are missing. The system asks the user to complete the missing information.*

Use case UC-03**:** Review and Approve/Reject Request

Related Requirements	*FR-04, FR-05, FR-07*
Description (Goal)	*Allow the Facilities Admin to review pending reservation requests and approve or reject them.*
Primary Actor(s)	*Facilities Admin*
Secondary Actor(s)	*Student, Staff/Faculty*
Preconditions	• *A pending reservation request exists in the system.*
Post-conditions	• *The request status becomes Approved or Rejected.* • *The action is recorded in the audit trail.* • *A decision notification is sent to the requester.*
Related use cases	*UC-02: Submit Reservation Request*
Basic Flow	1. *The Facilities Admin opens the list of pending requests.* 2. *The Facilities Admin selects one request.* 3. *The system displays the request details.* 4. *The Facilities Admin reviews the request.* 5. *The Facilities Admin approves the request.* 6. *The system updates the request status to Approved.* 7. *The system creates a confirmation record.* 8. *The system logs the action in the audit trail.* 9. *The system sends an approval notification to the requester.*
Alternative Flow	• *A1: The Facilities Admin rejects the request. The Facilities Admin enters a rejection reason, the system changes the status to Rejected, logs the action, and sends a rejection notification.* • *A2: A conflict or rule violation is detected during review. The system blocks approval and informs the admin.* • *A3: The Facilities Admin exits without making a decision. The request remains Pending.*

4. Non-functional Requirements

In addition to the functional requirements, the UniReserve system must satisfy the following non-functional requirements.

NFR-01: Performance

The system shall respond to search requests within 3 seconds under normal usage conditions.

Verification: Performance testing.

NFR-02: Availability

The system shall maintain at least 99% availability during working hours.

Verification: System monitoring.

NFR-03: Data Privacy

The system shall encrypt sensitive user data in storage and protect it from unauthorized access through access control mechanisms.

NFR-04: Usability

The system shall allow users to complete a booking request in no more than 5 steps.

Verification: Usability testing with users.

NFR-05: Security

The system shall require users to log in before accessing the system.

Sensitive data such as user details and booking records shall be encrypted.

Access to admin functions shall be limited to authorized users only.

Verification: Security and access control testing.

NFR-06: Maintainability

The system shall use a modular design to support future updates and maintenance.

The system shall log errors to support debugging and maintenance.

Verification: Code review and log inspection.

6. Domain overview

UniReserve is a web-based room and equipment reservation system designed for Kuwait University. The system is centered around several core domain concepts that support the reservation lifecycle and help organize the booking process clearly and consistently. The main domain concepts are User, Room, Equipment, Reservation Request, Booking, Notification, and Audit Log.

User: Anyone logged into the system. In the room reservation system context, this could be a Student, Staff/Faculty or Facilities Admin. Students and Staff/Faculty would use the system to make reservation requests and view upcoming bookings. Facilities Admins would monitor pending requests, verify system requests comply with organizational policies and decide to approve or deny the requests accordingly.

Room: List of reservable campus locations (classrooms, labs, meeting rooms, etc) defined by attributes such as RoomID, Type, Capacity, and whether the room is available.

Equipment: These are the reservable resources available for the class to use, such as additional projectors, lab kits, etc. Each type of resource will have an item with the following fields: EquipmentID, Type, and Status (Available or Unavailable).

Reservation Request: Created by a User to reserve a room or equipment for a specific date/time. Each request is given a request ID and starts as PENDING. Once the Facilities Admin has reviewed the request, it is changed to either APPROVED or REJECTED.

Booking: A Booking is a confirmed reservation that results from a successfully approved reservation request. A Booking "freezes" the details of the reservation and is linked to the Reservation Request that created it. Later, a Booking can be canceled or changed according to the policies set within the system.

Notification: Includes all the notifications that are enabled at critical points of the workflow, such as when a reservation request is submitted, approved, rejected, canceled, modified, and when a reminder is scheduled. Users will be informed of all events occurring in the reservation life cycle.

Audit Log: feature captures a record of all key actions that occur on the site. These captured records include the creation of a request, approvals, rejections, cancellations and amendments to requests as necessary. The purpose of these recorded actions is to provide auditing capabilities that can ensure governance, accountability and regulatory compliance.

5.2 Entity-relationship diagram (ERD) / domain model

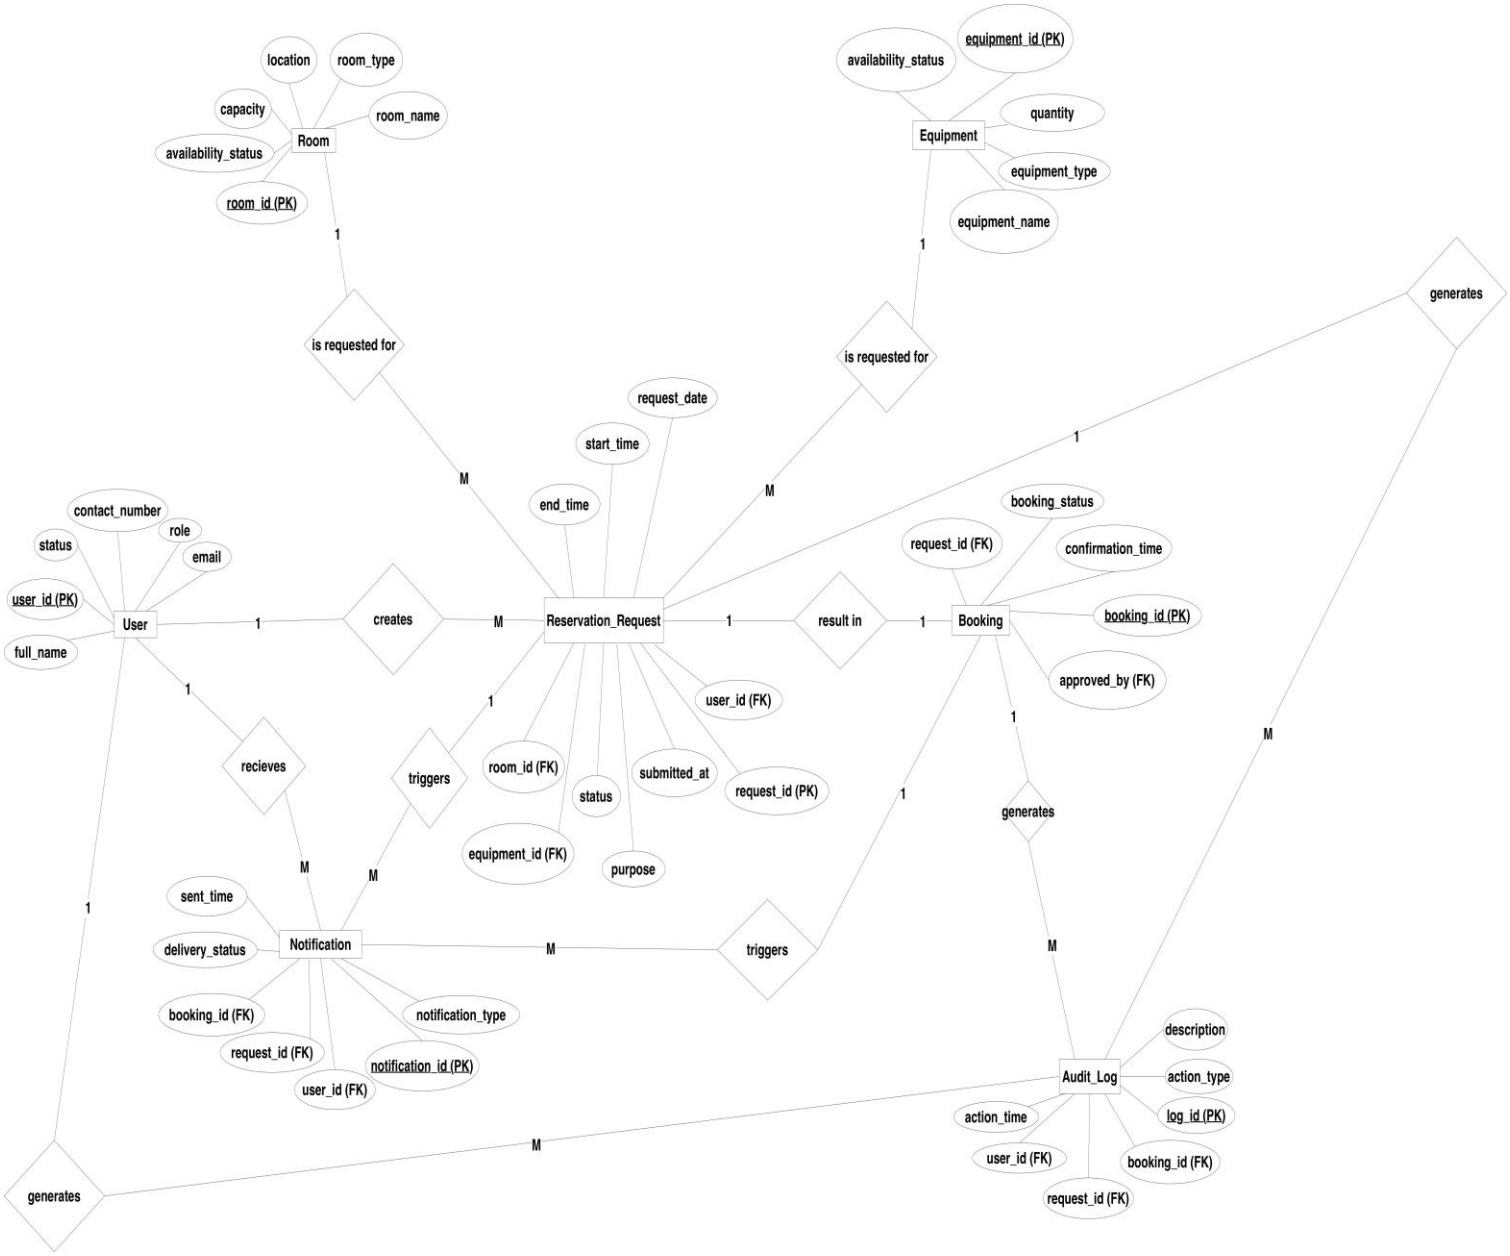

Figure 2 ER-Diagram

5.3 Data retention, deletion, and auditability

Retention:

In the UniReserve system, important system data such as booking records, reservation requests, and user information will be stored for up to 1 year. Audit logs will be stored for 6 months. This data is kept to support system monitoring, reporting, and troubleshooting. After this period, the system will automatically archive or delete old data to improve system performance and storage.

Deletion:

The UniReserve system will allow users to request deletion of their personal data. Once the request is submitted, the system will process the deletion request according to university data protection policy. Sensitive data such as user details will be permanently removed from the database. However, some non-personal information may remain in logs for auditing purposes. The system will also automatically delete expired booking data after the retention period ends.

Audit:

The UniReserve system will record all important activities performed by users and administrators. This includes:

- Submitting reservation requests
- Approving or rejecting requests
- Modifying or canceling bookings
- Notification events
- System errors or failed actions

Each audit record will include a timestamp, a user ID, an action type, and a status. These logs help ensure security, accountability, and transparency in the system. All data handling in UniReserve shall follow university data protection policies.

6. UI Prototype and Usability Evaluation

The goal of this prototype is to elicit requirements from the customer through scenario-based prototyping. The UniReserve prototype was designed to support the three main use cases of the system: Search Availability, Submit Reservation Request, and Review and Approve/Reject Request. It was tested on three users.

6.1 Prototype link(s)

- Figma / prototype: figma-prototype-link

6.2 Key screens and states

This section presents the main screens of the UniReserve prototype. The prototype covers the three main use cases of the system: Search Availability, Submit Reservation Request, and Review and Approve/Reject Request. Each screen demonstrates an important state in the user interaction flow

Scenario 1: Search Availability (UC-01)

- **Student Dashboard Screen**

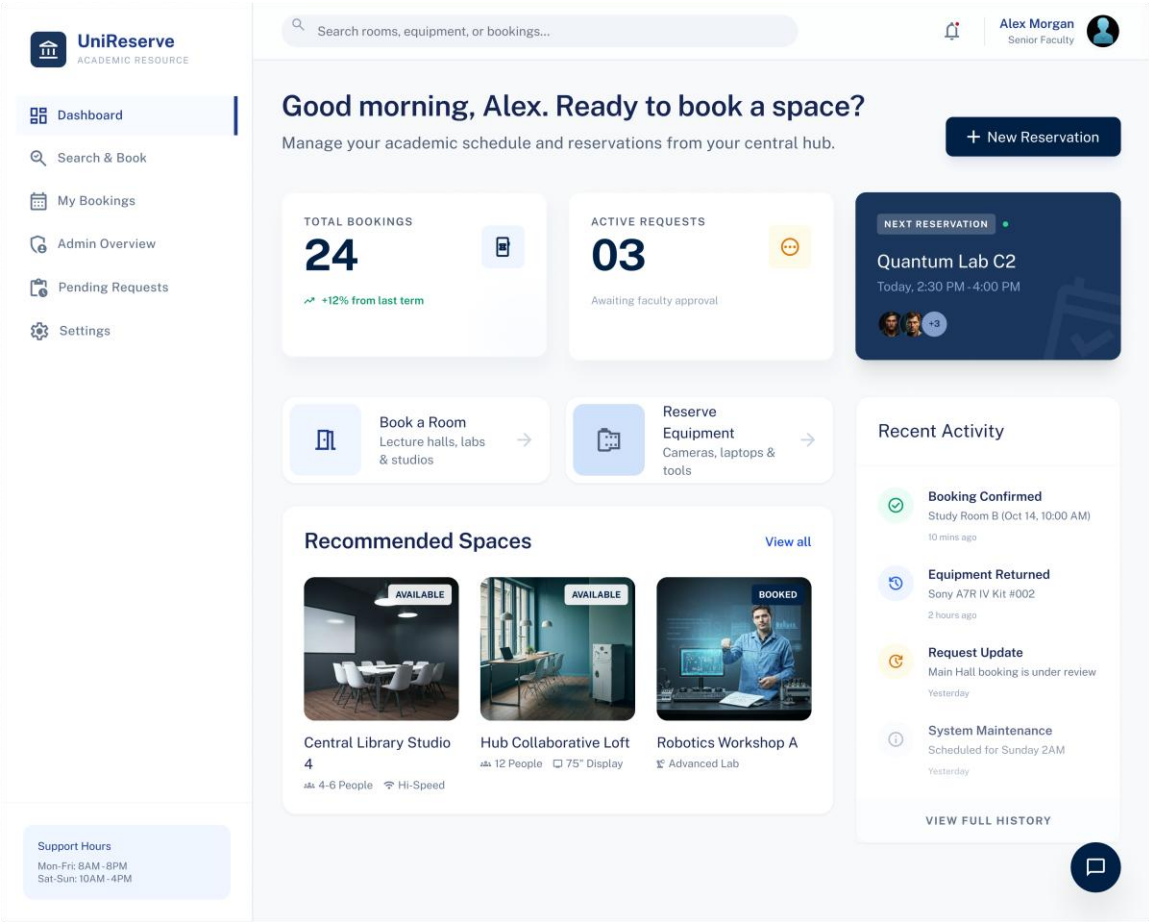

Figure 3 Student Dashboard Screen

Description: This is the main dashboard for students and staff users. It provides quick access to the system features, including searching for rooms or equipment and viewing booking status. It serves as the starting point for the user flow.

- **Search Availability Screen**

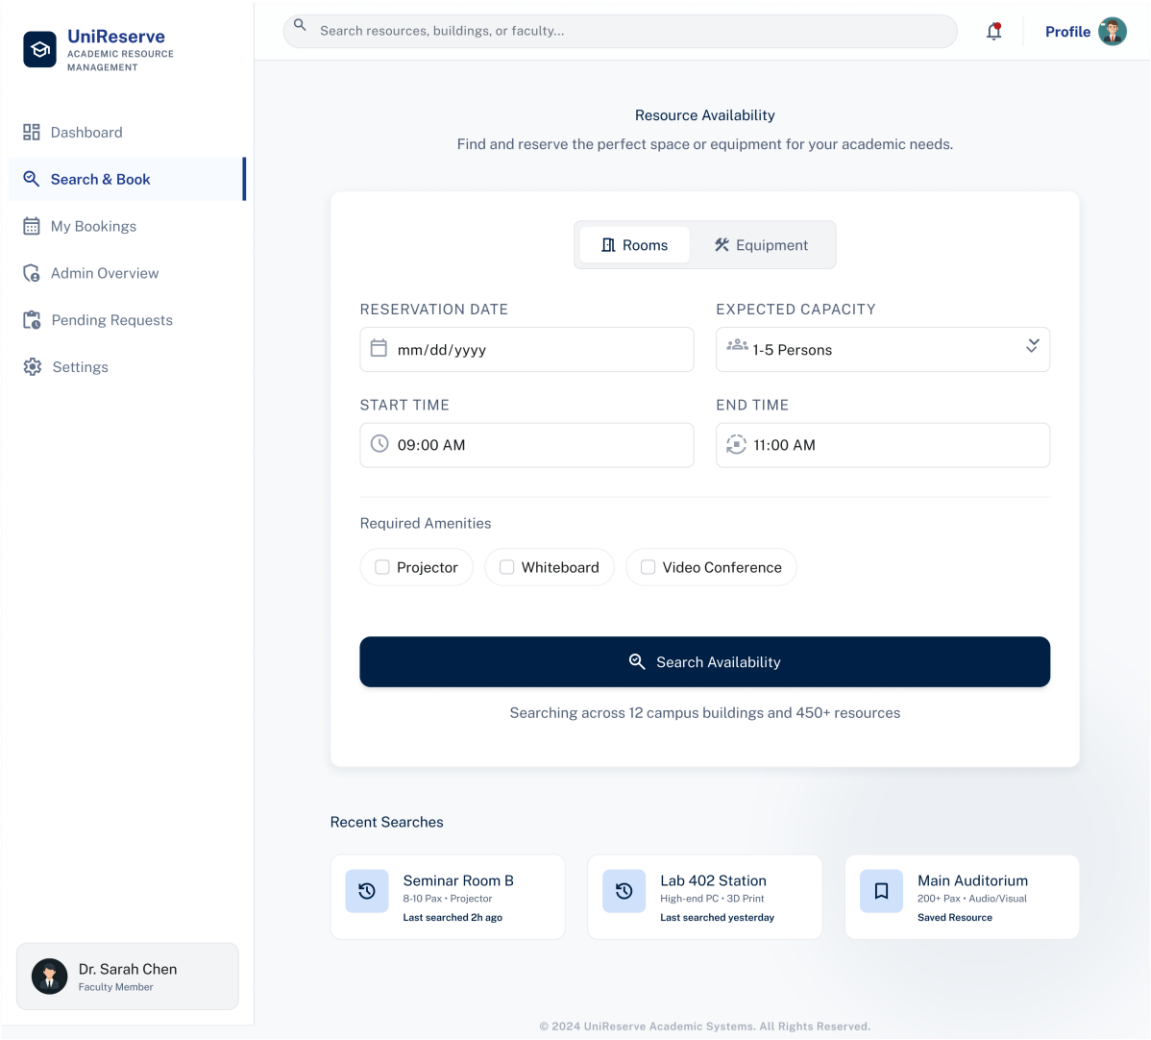

Figure 4 Search Availability Screen

Description: This screen allows the user to search for available rooms or equipment by entering the date, start time, end time, capacity, and resource type. It supports the main flow of UC-01: Search Availability.

- **Search Results Screen**

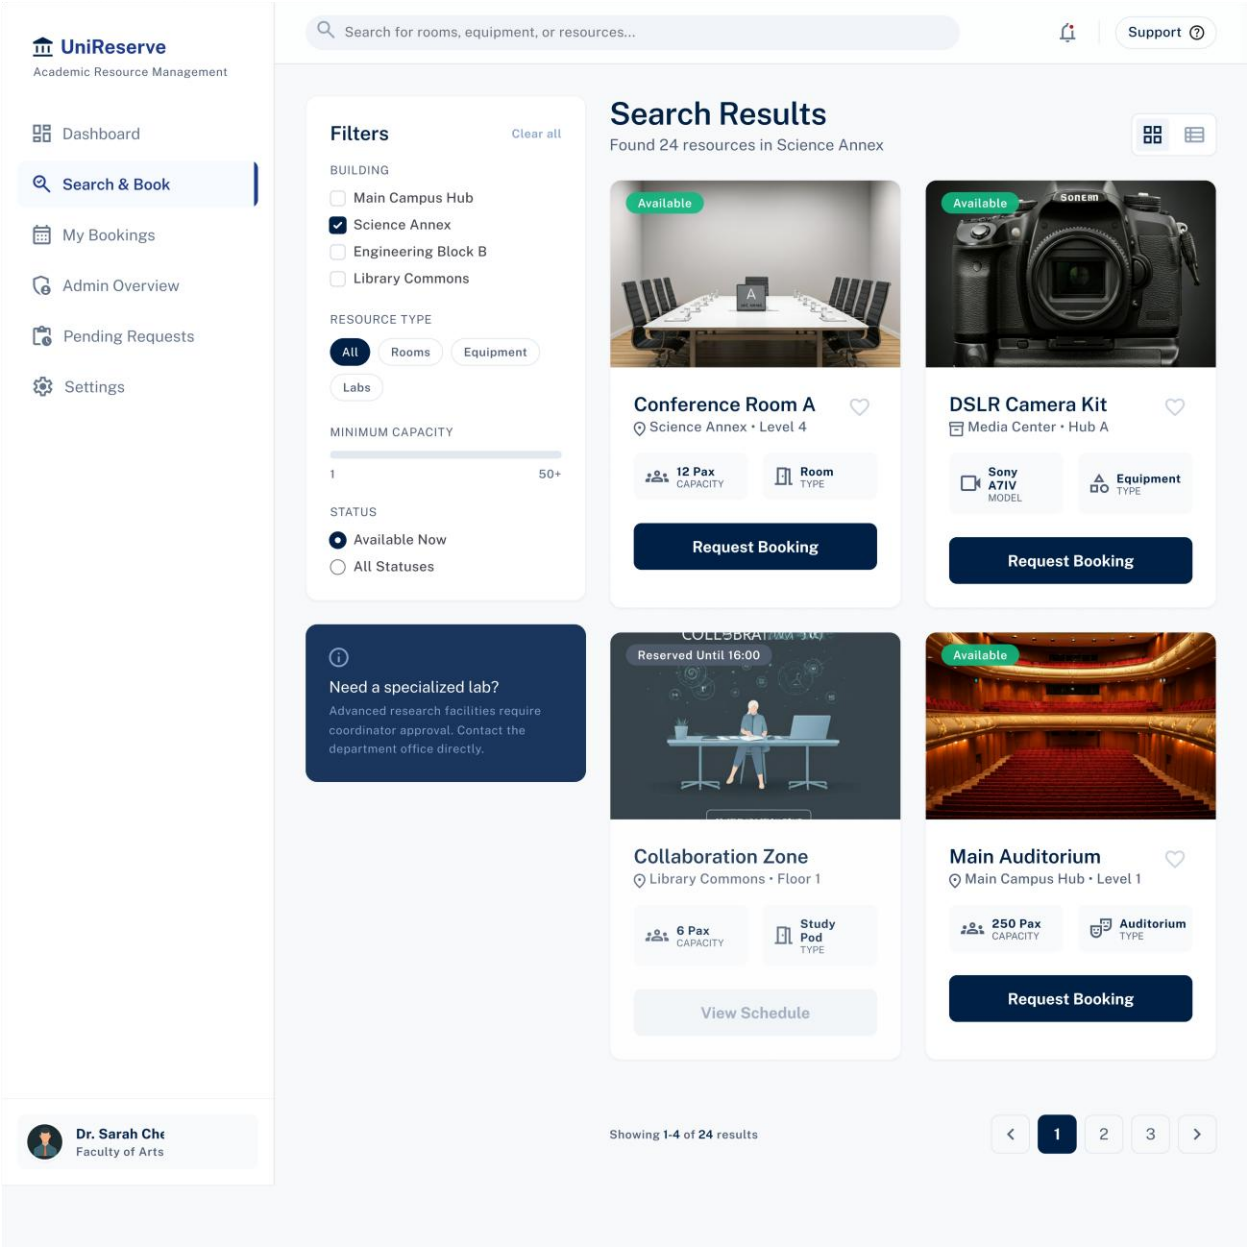

Figure 5 Search Results Screen

Description: This screen displays the matching search results after the user submits the search criteria. It shows the available resources along with details such as name, type, location, and availability status. From this screen, the user can continue to the booking request process.

Scenario 2: Submit Reservation Request (UC-02)

- **Booking Request Screen**

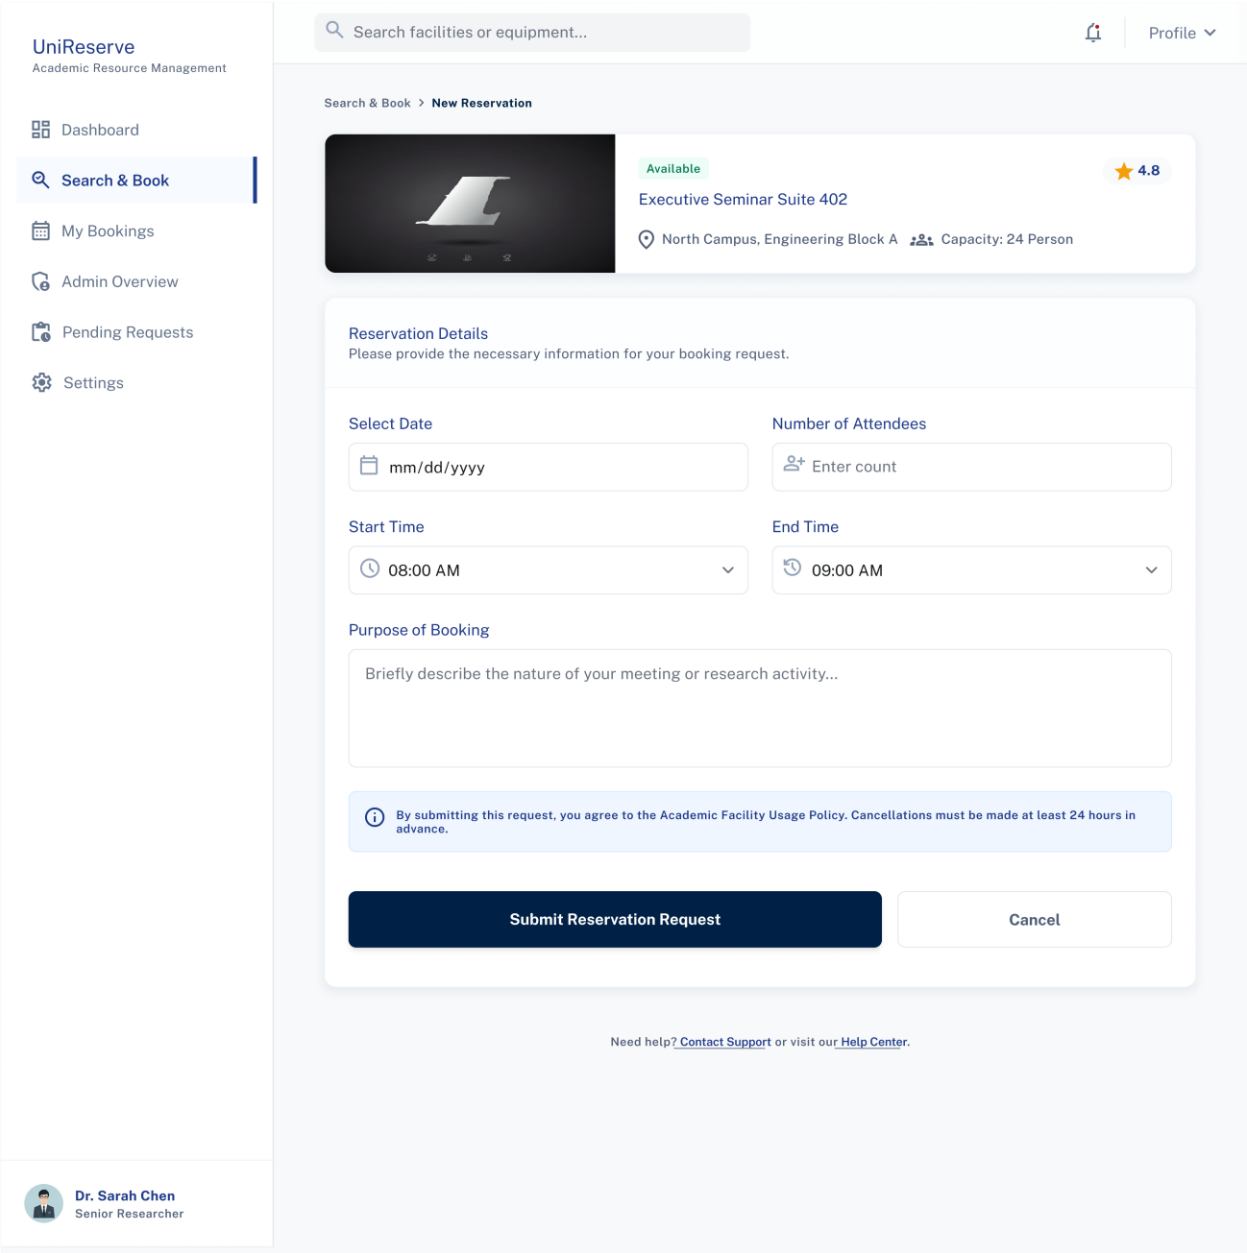

Figure 6 Booking Request **Screen**

Description: This screen allows the user to submit a reservation request for a selected room or equipment. It displays the selected resource and includes fields such as date, time, and purpose. It supports the main flow of UC-02: Submit Reservation Request.

- **Request Pending Screen**

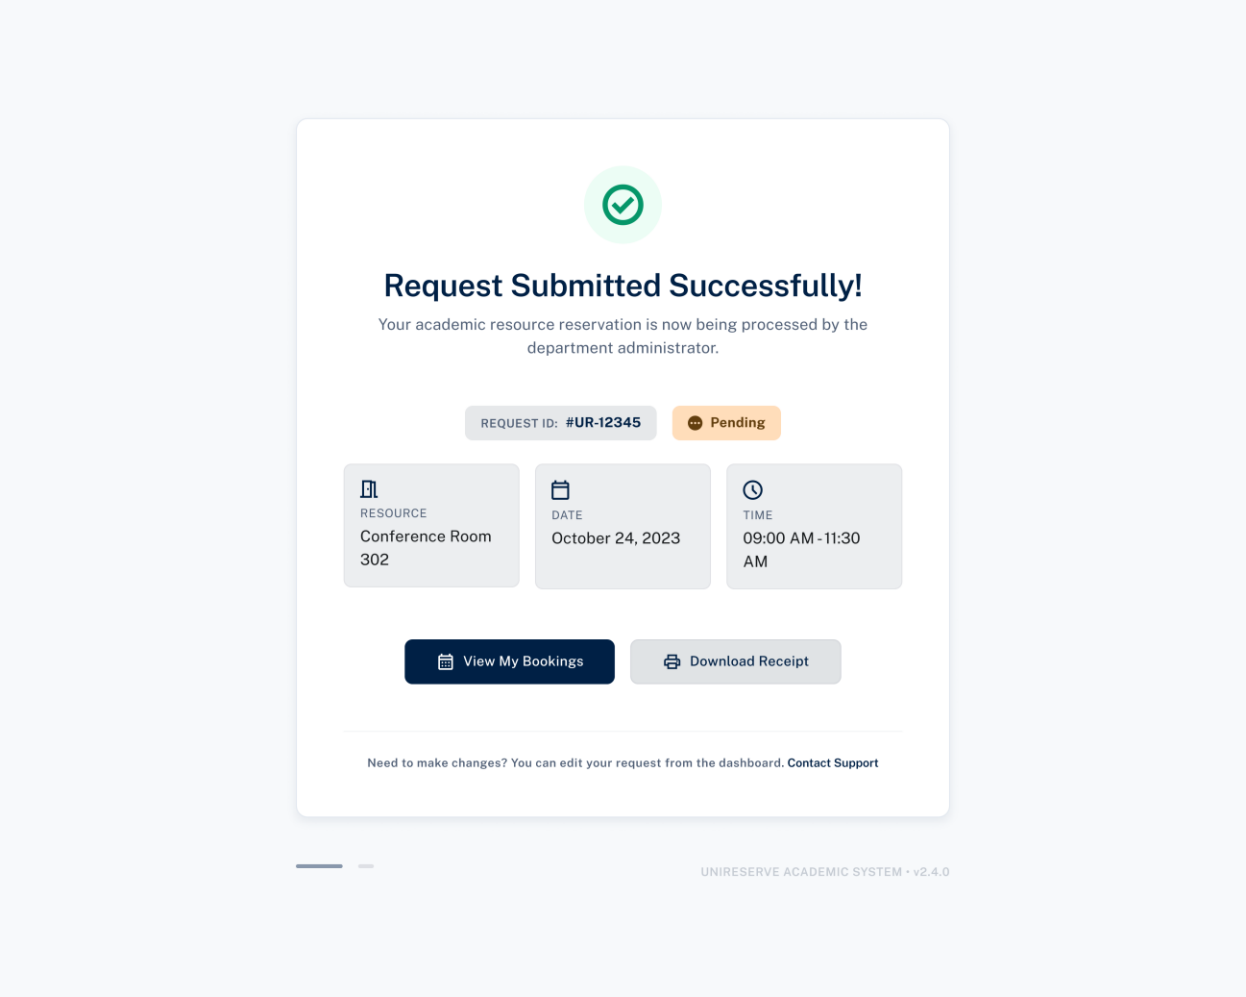

Figure 7 Request Pending **Screen**

Description: This screen confirms that the reservation request has been submitted successfully. It displays the request ID and the current request status as Pending, indicating that the request is waiting for admin review.

- **My Bookings Screen**

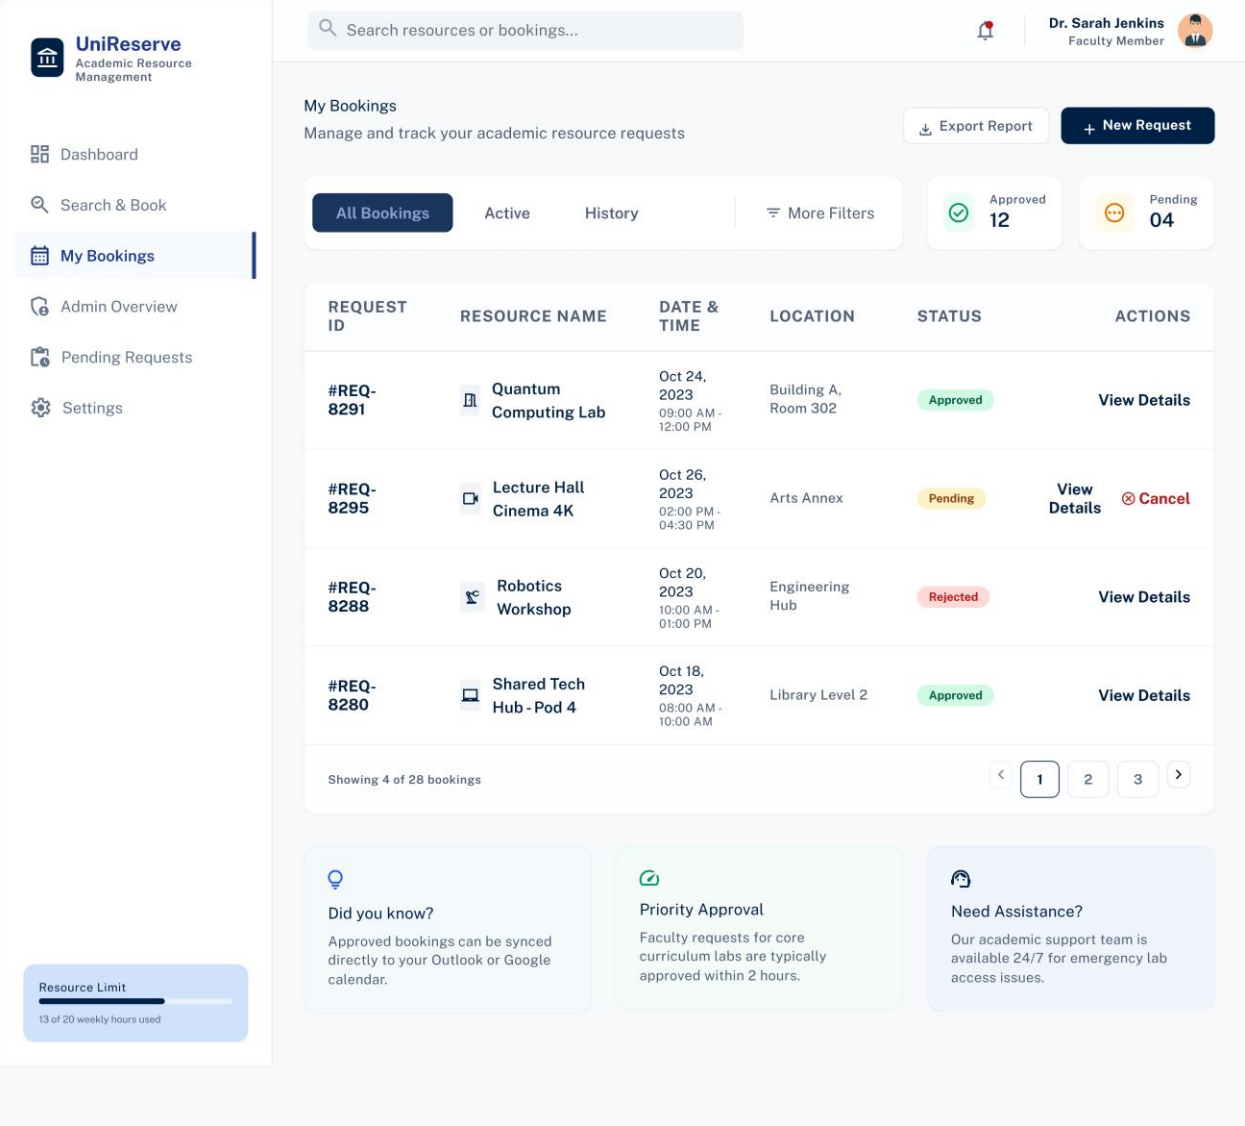

Figure 8 My Bookings **Screen**

Description: This screen allows the user to view the status of submitted booking requests. It shows important details such as request ID, resource, date, location, and current status (for example: Pending, Approved, or Rejected). This screen helps users track their requests after submission.

Scenario 3: Review and Approve/Reject Request (UC-03)

- **Admin Dashboard Screen**

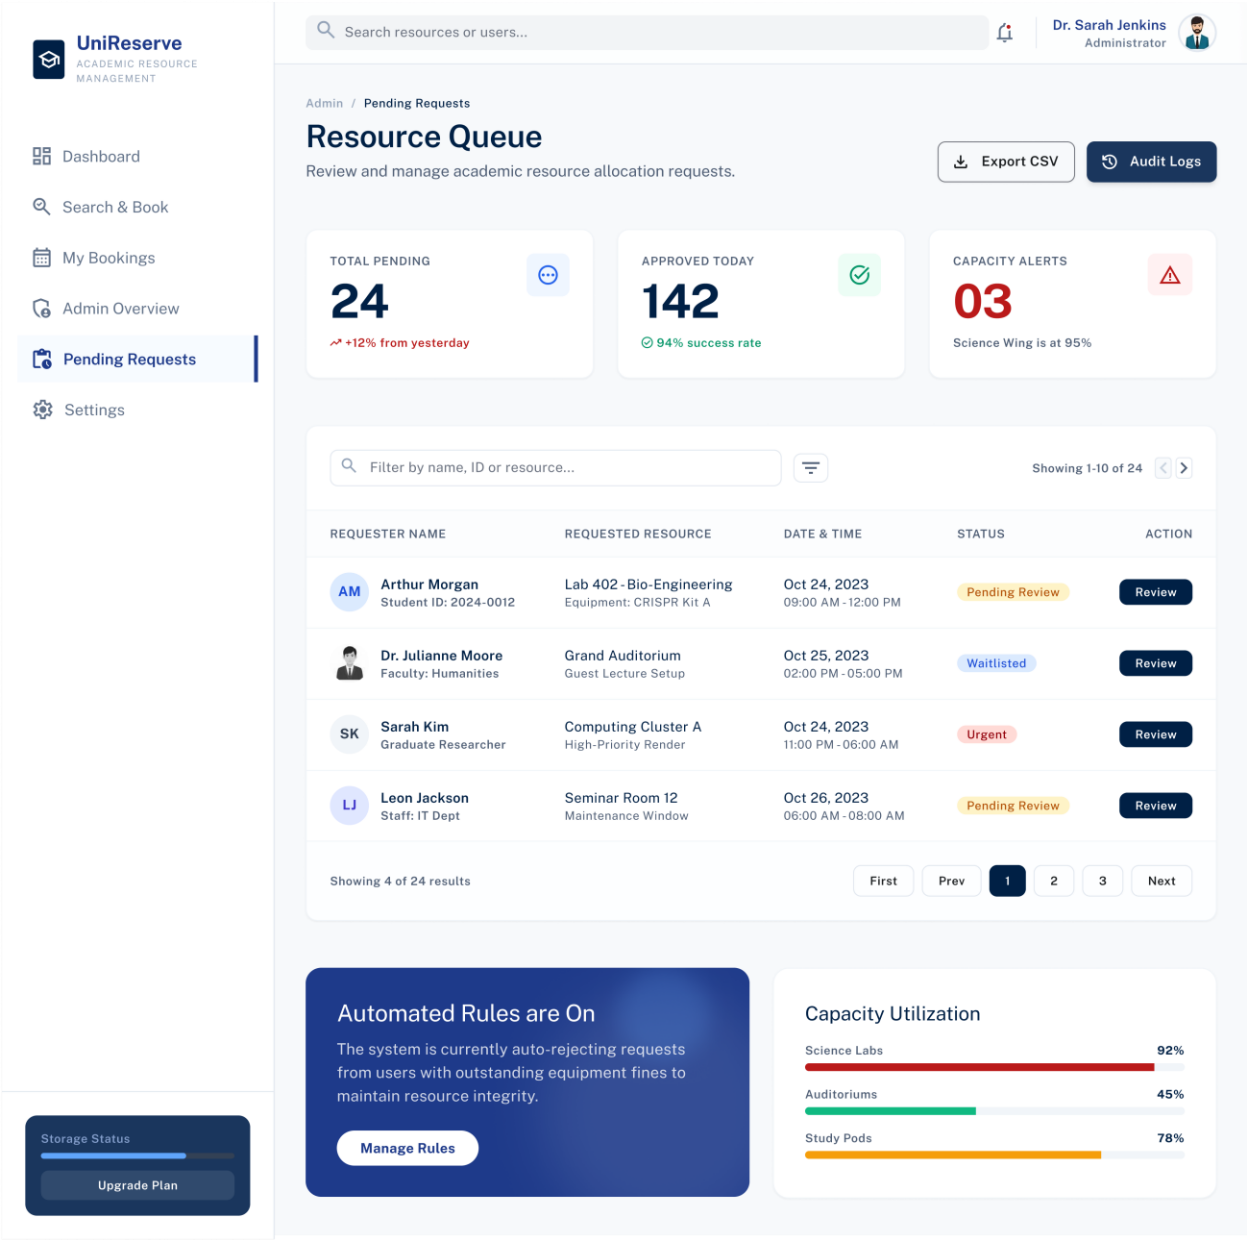

Figure 9 Admin Dashboard Screen

Description: This screen is the main dashboard for the Facilities Admin. It provides an overview of reservation activity and displays pending requests that require review. It supports the starting point of UC-03: Review and Approve/Reject Request.

- **Review Request Screen**

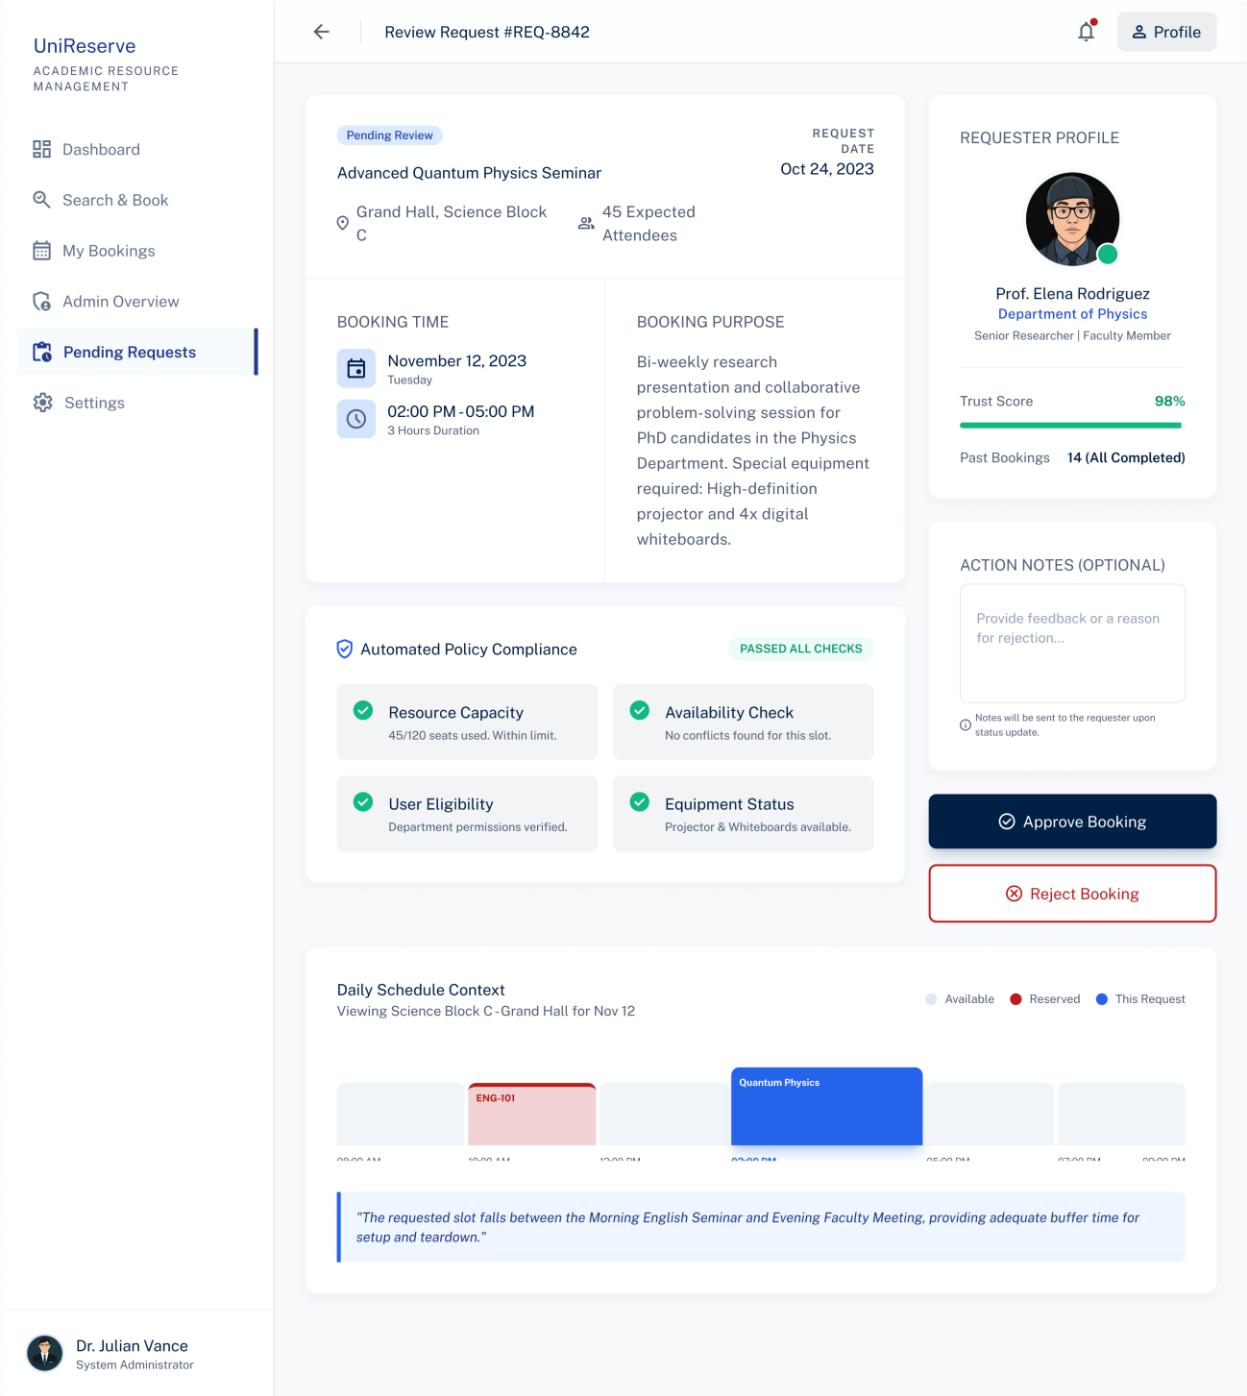

Figure 10 Review Request Screen

Description: This screen allows the Facilities Admin to review the full details of a reservation request. It includes request information, requester details, and validation or policy check information. The admin can approve or reject the request from this screen.

- **Review Result Screen**

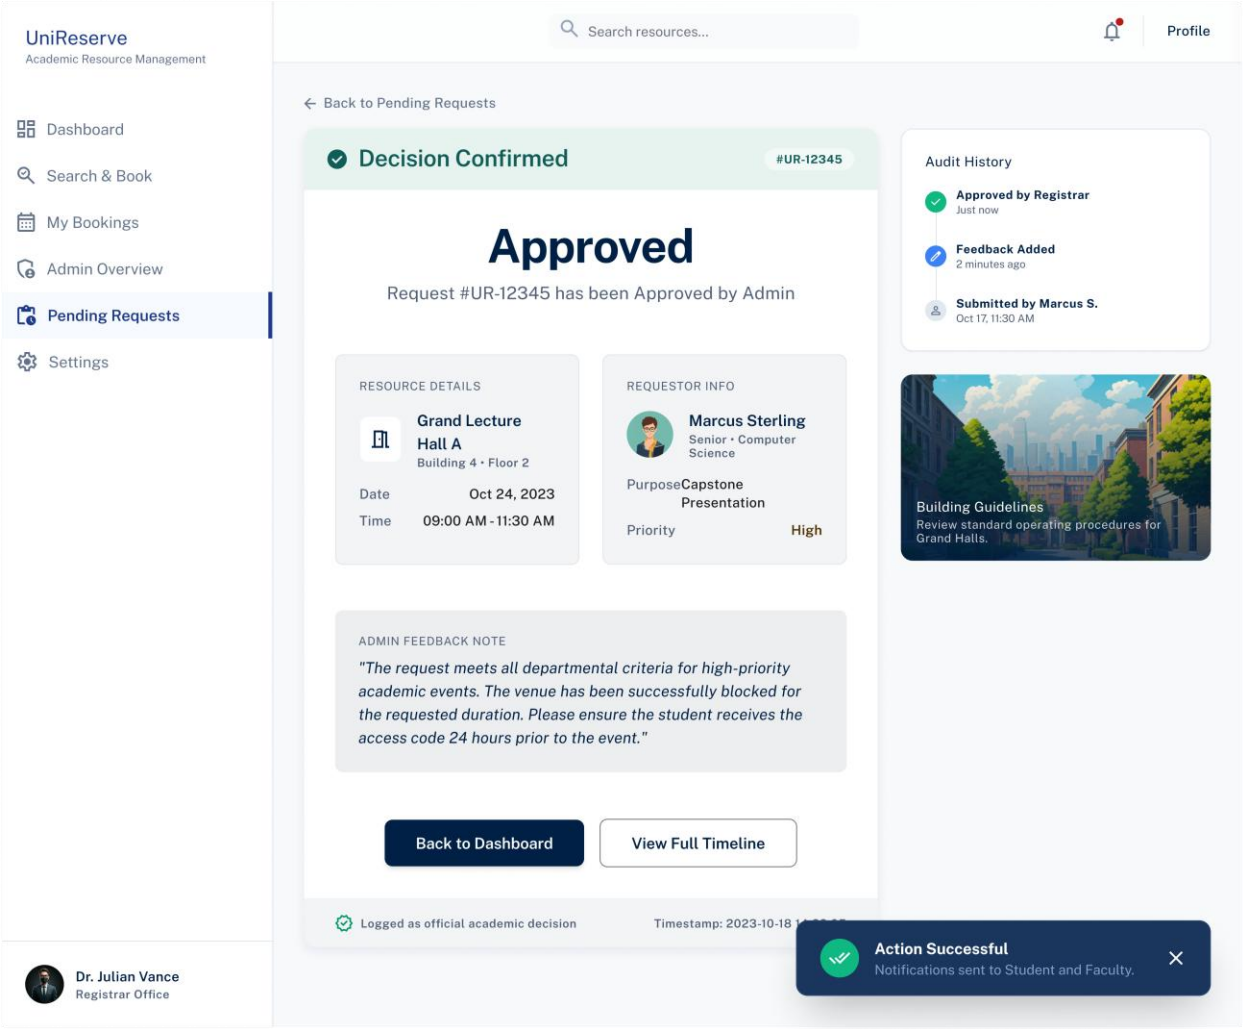

Figure 11 Review Result Screen

Description: This screen shows the final result after the admin has made a decision. It confirms whether the request was approved or rejected and displays the updated status. It represents the final state of UC-03.

UniReserve project artifacts*, including the Trello board, Figma prototype, GitHub repository, and team meeting minutes, used as supporting references for project management and development progress.*

7.2 Project Management

Work Breakdown Structure

Task ID	Task Name	Description / Deliverable	Responsible Member(s)	Start Date	Finish Date	Duration	Predecessor(s)
1.0	Phase 1: Project Initiation	Start the UniReserve project, define the team, and confirm project direction.	Team	2026-02-18	2026-02-24	7 days	—
1.1	Project proposal and team formation	Define project idea, team members, and initial scope. Deliverable: project proposal idea.	Team	2026-02-18	2026-02-24	7 days	—
1.2	Meeting 1: Scope and task distribution	Review assignment requirements, confirm extension feature, and assign tasks. Deliverable: Meeting Minutes 1.	Team	2026-02-24	2026-02-24	1 day	1.1

Task ID	Task Name	Description / Deliverable	Responsible Member(s)	Start Date	Finish Date	Duration	Predecessor(s)
2.0	Phase 2: R1-Part 1 — SRS Sections 1–3	Prepare the first SRS draft covering document control, introduction, functional requirements, and use cases.	Team	2026-02-24	2026-03-29	34 days	1.2
2.1	Use Case Diagram and 3 main UC specifications	Create the use case diagram and textual specifications for UC-01, UC-02, and UC-03. Deliverable: Use Case Model section.	Noura Almethen	2026-02-24	2026-03-28	33 days	1.2
2.2	Functional and initial non-functional requirements	Write system functional requirements and initial NFRs. Deliverable: FR/NFR draft.	Mouddy Almowsharji	2026-02-24	2026-03-28	33 days	1.2
2.3	Section 2: Introduction	Write purpose, product vision, scope, assumptions, dependencies, constraints, stakeholders, and overview. Deliverable: Introduction section.	Shaikha Almandeel	2026-02-24	2026-03-26	31 days	1.2
2.4	Meeting 2: Draft review	Review completed R1-Part 1 draft and check consistency. Deliverable: Meeting Minutes 2.	Team	2026-03-28	2026-03-28	1 day	2.1, 2.2, 2.3
2.5	R1-Part 1 integration and formatting	Integrate sections, polish formatting, and finalize the first submission. Deliverable: R1-Part 1 SRS draft.	Noura + Team	2026-03-28	2026-03-29	2 days	2.4
2.6	R1-Part 1 submission	Submit first part of SRS. Deliverable: R1-Part 1 submission.	Team	2026-03-29	2026-03-29	1 day	2.5

Task ID	Task Name	Description / Deliverable	Responsible Member(s)	Start Date	Finish Date	Duration	Predecessor(s)
3.0	Phase 3: R1-Part 2 — SRS Sections 4–7	Complete remaining SRS sections: NFRs, domain model, UI prototype, usability evaluation, appendix, WBS, and Gantt chart.	Team	2026-04-04	2026-04-25	22 days	2.6
3.1	Meeting 3: R1-Part 2 kickoff	Confirm remaining sections and weekly meeting plan. Deliverable: Meeting Minutes 3.	Team	2026-04-04	2026-04-04	1 day	2.6
3.2	UC textual specifications and UI Scenario 1	Refine UC-01, UC-02, UC-03 and create Search Availability prototype screens. Deliverable: UC specs + Scenario 1 UI screens.	Noura Almethen	2026-04-04	2026-04-11	8 days	3.1
3.3	NFRs Section 4	Finalize measurable non-functional requirements with verification methods. Deliverable: Section 4.	Mouddy Almowsharji	2026-04-04	2026-04-11	8 days	3.1
3.4	Domain Overview Section 5	Draft domain concepts: User, Room, Equipment, Reservation Request, Booking, Notification, and Audit Log. Deliverable: Section 5 draft.	Shaikha Almandeel	2026-04-04	2026-04-11	8 days	3.1
3.5	Meeting 4: Progress review	Review UC specs, NFRs, and domain overview; plan ERD and remaining UI screens. Deliverable: Meeting Minutes 4.	Team	2026-04-11	2026-04-11	1 day	3.2, 3.3, 3.4
3.6	ERD and UI Scenarios 2–3	Design ERD/domain model and complete Booking Request, Request Pending, My Bookings, Admin Dashboard, Review Request, and Review Result screens. Deliverable: ERD + UI prototype screens.	Noura Almethen	2026-04-11	2026-04-18	8 days	3.5
3.7	Data retention, deletion, and auditability	Write Section 5.3 and refine NFRs based on review. Deliverable: Section 5.3.	Mouddy Almowsharji	2026-04-11	2026-04-18	8 days	3.5
3.8	Appendix, references, and WBS draft	Draft references, project management section, WBS table, and UI descriptions. Deliverable: Appendix draft.	Shaikha Almandeel	2026-04-11	2026-04-18	8 days	3.5
3.9	Meeting 5: Draft review	Review ERD, UI screens, retention section, and appendix draft. Deliverable: Meeting Minutes 5.	Team	2026-04-18	2026-04-18	1 day	3.6, 3.7, 3.8

Task ID	Task Name	Description / Deliverable	Responsible Member(s)	Start Date	Finish Date	Duration	Predecessor(s)
4.0	Phase 4: Final Integration, Review, and Submission	Complete final revisions, proofread the full SRS, and prepare the final report submission.	Team	2026-04-18	2026-04-26	9 days	3.9
4.1	UC revisions and full document integration	Revise use case diagram/specifications based on instructor comments, format tables and figures, and integrate the full document. Deliverable: integrated SRS draft.	Noura Almethen	2026-04-18	2026-04-25	8 days	3.9
4.2	NFR verification methods finalized	Finalize verification methods and proofread Sections 4 and 5.3. Deliverable: finalized NFR and auditability sections.	Mouddy Almowsharji	2026-04-18	2026-04-25	8 days	3.9
4.3	Gantt chart, usability evaluation, and references	Complete Gantt chart, fill usability evaluation table, and finalize references. Deliverable: Gantt chart + usability evaluation + references.	Shaikha Almandeel	2026-04-18	2026-04-25	8 days	3.9
4.4	Meeting 6: Peer review	Review fully integrated SRS v0.4 and confirm all sections are complete. Deliverable: Meeting Minutes 6.	Team	2026-04-24	2026-04-24	1 day	4.1, 4.2, 4.3
4.5	Apply peer feedback and final formatting	Final formatting pass, table of contents check, page numbers, figure captions, version history, and proofread. **Deliverable:** final SRS document.	Team	2026-04-24	2026-04-26	3 days	4.4
4.6	Final project submission	Submit final SRS report with WBS, Gantt chart, meeting minutes, and supporting links. **Deliverable:** final submission.	Team	2026-04-25	2026-04-25	1 day	4.5

Team Meeting Minutes 1

Team Name:	**UniReserve**	**Date:**	**2026-02-24**
Start Time:	**7:30 PM**	**Finish Time:**	**8:10 PM**

Members Present:	**Noura Almethin, Mouddy Almowsharji, Shaikha Almandeel**
Members Excused:	**None**
Members Tardy:	**None**
Members Absent:	**None**

Summary of meeting

1. The team reviewed the R1-Part 1 assignment requirements and confirmed that the submission would include Sections 1, 2, and 3 of the SRS.
2. The team agreed to use Notifications and Reminder Schedule as the project extension.
3. The team discussed the main actors and use cases of the UniReserve system.
4. Tasks were divided among the team members.

Task list:

Team Member	Assigned Tasks	Start Date	Due Date
Noura Almethin	Use case diagram and 3 main use case specifications	2026-02-24	2026-03-28
Mouddy Almowsharji	Functional requirements and non-functional requirements	2026-02-24	2026-03-28
Shaikha Almandeel	Section 2: Introduction	2026-02-24	2026-03-28

Next meeting will be held on 2026-03-28

Team Meeting Minutes 2

Team Name:	**UniReserve**	**Date:**	**2026-03-28**
Start Time:	**9:00 PM**	**Finish Time:**	**11:10 PM**

Members Present:	**Noura Almethin, Mouddy Almowsharji, Shaikha Almandeel**
Members Excused:	**None**
Members Tardy:	**None**
Members Absent:	**None**

Summary of meeting

1. The team reviewed the completed draft of the SRS sections for R1-Part 1.
2. The functional requirements, non-functional requirements, and use cases were checked for consistency.
3. Minor edits were discussed for wording, formatting, and use case relationships.
4. The final submission responsibilities were confirmed.

Task list:

Team Member	Assigned Tasks	Start Date	Due Date
Noura Almethin	Final review, formatting, and integration of the document	2026-03-28	2026-03-29
Mouddy Almowsharji	Review requirement wording and confirm final changes	2026-03-28	2026-03-29
Shaikha Almandeel	Review Introduction section and support final document check	2026-03-28	2026-03-29

Next meeting will be held on: 4-4-2026

Team Meeting Minutes 3

Team Name:	**UniReserve**	**Date:**	**2026-04-04**
Start Time:	**8:00 PM**	**Finish Time:**	**9:45 PM**

Members Present:	**Noura Almethin, Mouddy Almowsharji, Shaikha Almandeel**
Members Excused:	**None**
Members Tardy:	**None**
Members Absent:	**None**

Summary of meeting

- The team reviewed the R1-Part 2 assignment requirements and confirmed the scope of work to be added on top of the R1-Part 1 submission.
- The team discussed the remaining SRS sections to be completed: Non-functional Requirements (Section 4), Domain Overview and ERD (Section 5), UI Prototype (Section 6), and Appendix (Section 7).
- The team agreed on a weekly meeting schedule every Saturday until the R1-Part 2 submission.

Task list:

Team Member	Assigned Tasks	Start Date	Due Date
Noura Almethin	Write full textual specifications for UC-01, UC-02, UC-03; start Figma UI prototype for Search Availability (Scenario 1) screens (Dashboard, Search, Search Results)	2026-04-04	2026-04-11

Team Member	Assigned Tasks	Start Date	Due Date
Mouddy Almowsharji	Draft Non-functional Requirements (NFR-01 to NFR-06) with verification methods	2026-04-04	2026-04-11
Shaikha Almandeel	Draft Section 5 Domain Overview (User, Room, Equipment, Reservation Request, Booking, Notification, Audit Log)	2026-04-04	2026-04-11

Next meeting will be held on 2026-04-11

Team Meeting Minutes 4

Team Name:	**UniReserve**	**Date:**	**2026-04-11**
Start Time:	**7:45 PM**	**Finish Time:**	**10:15 PM**

Members Present:	**Noura Almethin, Mouddy Almowsharji, Shaikha Almandeel**
Members Excused:	**None**
Members Tardy:	**None**
Members Absent:	**None**

Summary of meeting

- The team reviewed the drafts delivered in Meeting 3: the use case textual specifications, the non-functional requirements, and the domain overview.
- The team discussed the structure of the Entity-Relationship Diagram, identified all entities (User, Room, Equipment, Reservation_Request, Booking, Notification, Audit_Log) and their attributes, and agreed that Noura would lead the ERD design.
- The team planned the remaining UI prototype work for Scenario 2 (Submit Reservation Request) and Scenario 3 (Review and Approve/Reject Request).

Task list:

Team Member	Assigned Tasks	Start Date	Due Date
Noura Almethin	Design the full ERD / domain model (Section 5.2); complete UI prototype screens for Scenario 2 (Booking Request, Request Pending, My Bookings) and Scenario 3 (Admin Dashboard, Review Request, Review Result)	2026-04-11	2026-04-18
Mouddy	Write Section 5.3 Data Retention,	2026-04-11	2026-04-18

Team Member	Assigned Tasks	Start Date	Due Date
Almowsharji	Deletion, and Auditability; refine NFRs based on team review, write Section 6.1		
Shaikha Almandeel	Draft Section 7 Appendix: References and start the Work Breakdown Structure (WBS) table, 6.2 descriptions	2026-04-11	2026-04-18

Next meeting will be held on 2026-04-18

Team Meeting Minutes 5

Team Name:	**UniReserve**	**Date:**	**2026-04-18**
Start Time:	**8:15 PM**	**Finish Time:**	**11:00 PM**

Members Present:	**Noura Almethin, Mouddy Almowsharji, Shaikha Almandeel**
Members Excused:	**None**
Members Tardy:	**None**
Members Absent:	**None**

Summary of meeting

- The team reviewed the completed ERD and all UI prototype screens prepared by Noura; the diagrams and screens were approved with only minor labeling changes.
- Mouddy presented the Data Retention, Deletion, and Auditability section; the team agreed on a 1-year retention for booking records and 6 months for audit logs.
- Shaikha presented the initial Appendix draft including references and a first version of the Work Breakdown Structure.
- Final work distribution for the consolidation phase was agreed, keeping the integration and revision workload with the team leader.

Task list:

Team Member	Assigned Tasks	Start Date	Due Date
Noura Almethin	Revise use case diagram and textual specifications based on instructor comments, format tables, figures, and cross references, update version history, lead final quality review	2026-04-18	2026-04-24
Mouddy	Finalize verification methods for all	2026-04-18	2026-04-24

Team Member	Assigned Tasks	Start Date	Due Date
Almowsharji	NFRs; proofread Sections 4 and 5.3		
Shaikha Almandeel	Complete the Gantt chart; fill in the Usability Evaluation table (Section 6.3); finalize References list	2026-04-18	2026-04-24

Next meeting will be held on 2026-04-25

Team Meeting Minutes 6

Team Name:	**UniReserve**	**Date:**	**2026-04-24**
Start Time:	**9:00 PM**	**Finish Time:**	**11:30 PM**

Members Present:	**Noura Almethin, Mouddy Almowsharji, Shaikha Almandeel**
Members Excused:	**None**
Members Tardy:	**None**
Members Absent:	**None**

Summary of meeting

- The team reviewed the fully integrated SRS document (v0.4) prepared, incorporating all revisions based on the instructor feedback on the use case model.
- Noura walked the team through the final document structure, confirmed all cross-references (FRs to UCs, NFRs, and ERD entities), and verified that all sections (1 through 7) are complete.
- Mouddy confirmed that all NFR verification methods are finalized and that Sections 4 and 5.3 have been proofread.
- Shaikha confirmed the Gantt chart, Work Breakdown Structure, Usability Evaluation table, and References are complete and ready for inclusion.

Task list:

Team Member	Assigned Tasks	Start Date	Due Date
Noura Almethin	Final formatting pass of the integrated SRS verify table of contents, page numbers, figure captions, and version history.	2026-04-24	2026-04-25
Mouddy Almowsharji	Last proofread of Sections 4 and 5.3 in the integrated document	2026-04-24	2026-04-25

Team Member	Assigned Tasks	Start Date	Due Date
Shaikha Almandeel	Last proofread of Section 2 and the Appendix (References, WBS, Gantt) in the integrated document	2026-04-24	2026-04-25
